

CBRN Protective Gloves & Socks

CQC's breathable gloves & socks offer the perfect solution to the important integration between the CBRN jacket cuff & ankle closure. Giving protection in these vulnerable areas, no-matter what CBRN garment system is being used.

Compared to non-breathable Butyl rubber, or membrane-based gloves & socks, the lightweight & breathable fabrics used in CQC's gloves & socks offer a substantial higher level of comfort combined with a lower level of burden. This negates the issue of moisture build up and allows the wearer to function at ease for much longer periods, even in the most arduous of CBRN environments.

Available in 4 sizes, the gloves are constructed using a lightweight activated carbon liner fabric, combined with a rugged flame-retardant outer fabric. With an elasticated cuff, the gloves can be donned over or under the sleeve, allowing for excellent integration. Additional knuckle & palm protection ensures durability, & reinforced fingertips allow touch screen compatibility.

Socks are available in 7 sizes, and constructed from the same lightweight carbon fabric, combined with reinforced sole for extra durability. The half calf design & elasticated top ensure excellent wearer comfort & integration with trouser leg.

The fabrics of the CBRN gloves & socks have been tested to NATO standards and offer 24 Hour protection against a range of CWA's.

KEY FEATURES:

- 24-hour protection to NATO standard*
- Flame Repellence
- Rip-Stop outer shell
- Oil & liquid repellent
- 10 year shelf life
- Highly breathable & low burden
- High protection & high comfort
