

RAPTOR 1 CBRN Protection System

CQC's most popular CBRN system, the RAPTOR 1 coverall offers the ultimate in functionality for First Responders, Military, and other CBRN trained personnel

The RAPTOR 1 CBRN Protection System has been designed & developed to provide 24-hour protection against a wide range of CWA threats in a contaminated CBRN environment. Developed for use in all climates, the RAPTOR system utilises a lightweight & breathable carbon inner combined with a Rip-Stop outer which offers repellence to flame, oil & liquid. This fabric combination is in use globally by a wide range of CBRN Specialists and Militaries as it allows the wearer to function at ease for extended periods, in even the most difficult of contaminated CBRN environments. With unique closure systems including integrated storm cuffs and adjustable waist, the RAPTOR 1 design ensures that when worn with the appropriate ancillary items (approved CBRN boots, gloves & respirator), no vapour ingress is possible around these vulnerable areas.

KEY FEATURES:

- 24-hour protection to NATO standard*
- Exceeds MIST (Man in Simulant Test) requirements to NATO standard*
- Flame Repellence
- Rip-Stop outer fabric
- Oil & liquid repellent
- 10 year shelf life
- Highly breathable & extremely low burden
- High protection combined with high comfort
- Mid-size suit weighs only 1.6Kg's
