

RAPTOR 2C CBRN Protection System

A high protection 2 piece over-suit offering 24-hour protection against a range of CBRN threats. A versatile solution for First Responders, Military, and other CBRN trained personnel in all climates

Using the same design as CQC's standard RAPTOR System, the RAPTOR 2C CBRN Protection System has been designed & developed to provide 24-hour protection against a wide range of CWA threats in a contaminated CBRN environment. Developed for use in all climates, the RAPTOR 2C system utilises a breathable carbon inner combined with a Rip-Stop outer which offers repellence to flame, oil & liquid. This same fabric combination has been used by the UK Armed Forces for over 20 years as it offers the wearer the perfect balance between protection & comfort when worn in even the most difficult of contaminated CBRN environments. With unique closure systems including integrated storm cuffs waist skirt, the RAPTOR 2C design ensures that when worn with the appropriate ancillary items (approved CBRN boots, gloves & respirator), no vapour ingress is possible around these vulnerable areas.

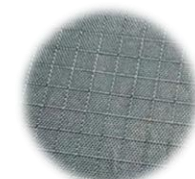

KEY FEATURES:

- 24-hour protection to NATO standard*
- Flame Repellence
- Rip-Stop outer fabric
- Oil & liquid repellent
- 10 year shelf life
- Highly breathable & extremely low burden
- High protection combined with high comfort
- Mid-size suit weighs only 2.1Kg's
