

FIBRELIGHT Throwline Bag

The Fibrelight throwline bag is for rescue use from land or from a vessel. Perfect for use in conjunction with the Fibrelight scramble net or ladders.

Designed in house and using high quality fabrics, the design of the throwbag allows for precise aim and therefore a higher chance of recovery. Using the weighted ergonomic throw bag and its 8mm floating rope, the bag is thrown towards the casualty. The bag also has the ability to be recovered and re-thrown if required. The bag uses a wider 'neck' to allow for easy repacking after use.

Available in lengths of 10M, 20M and 30M
also available in Blue or Orange.
